

thinkingresourcefully

Georgia-Pacific Professional products; services and manufacturing processes are designed for sustainability, while following the EPA's hierarchy of Reduce, Reuse, and Recycle. Our vigilance regarding conservation of natural resources is clear in all we do.

A Leader In Reduce, Reuse, Recycle

- We use **2.5 times** more recovered fiber in our towel and tissue products than the next largest manufacturer - approximately **1.6 million tons** total.
- We recover, regrind, and recycle the preconsumer materials within our plastic foodservice manufacturing operations. Dixie paper plates, hot cups, trays, and drink carriers are made from **90%** renewable resources.
- GP uses approximately **1,200,000** tons of recovered fiber to make cartons and shipping containers.
- GP created Harmon Associates to facilitate the brokerage of **6,000,000** tons of recovered paper, over **10%** of the U.S. supply of wastepaper.

A Long-Standing Environmental Steward

- Since the 1930's, GP has pioneered systems that reduce waste by more than 25% with industry leased stalwarts Cormatic® and Towlmastr® and modern-day enMotion®.
- Added another building block to our Green by Design™ program with third-party audits and certification of products and processes by **TerraChoice**, the **National Sanitation Foundation** and the **Chlorine Free Products Association**.
- GP Professional currently offers **over 60** products that meet or exceed EPA guidelines for post consumer waste.
- Since 2000, GP has reduced its direct greenhouse gas emissions by **11%**, indirect emissions by **6%**, and neutral biomass emissions by **7%**.

Investing in the environment and our customers.
